Topic: Comparison of Mobile BI Tools

Q1) Compare any two Mobile BI tools such as, Microsoft Power BI and Tableau based on,

Mobile user interface.

Microsoft Power BI:

Power BI provides a clean and user friendly mobile interface with optimized layouts for phones and tablets. It offers touch-friendly navigation and easy access to reports.

Tableau:

Tableau provides a more visually rich interface with highly customized dashboards but it may require additional effort to optimize layouts for mobile devices.

Dashboard Interactivity:

Microsoft Power BI:

Power BI supports interactive dashboards with features like drill-down and real-time alerts making it easy for users to explore data.

Tableau:

Tableau offers more advanced and flexible

Date _____

interactivity, including dynamic filtering, parameters and storytelling, features which provide deeper data exploration capabilities.

Q2) Differentiate between Microsoft Power BI and Qlik Sense in terms of:

Data handling approach:

Power BI: It uses a structured, model based approach where data is loaded into predefined schemas, using relationships.

Qlik Sense:

Qlik Sense uses an associative data model, allowing users to explore data freely without predefined queries, enabling more flexible data discovery.

Real time Analytics Capability:

Power BI:

Power BI supports real time analytics through streaming datasets and integration with Azure Stream Analytics.

Qlik Sense:

Qlik Sense also supports real time - data updates but is generally more focused on in-memory processing and may require additional configuration for live data streaming.

Q3) Compare why two Mobile BI tools based on:

(Example tools: Tableau, SAP Business Objects Mobile).

Integration with Multiple Data Sources:

Tableau:

Tableau supports a wide range of data sources, including cloud services, databases and spreadsheets with strong live and extract connections.

SAP Business Objects Mobile:

SAP Business Objects Mobile integrates well with SAP and non-SAP data sources but is more optimized for SAP ecosystem.

Offline Access and Synchronization Features:

Tableau:

Tableau allows offline access by saving snapshots of dashboard, but real-time interaction is limited without connectivity.

SAP Business Objects Mobile:

SAP Business Objects Mobile provides robust offline capabilities with scheduled report download and synchronization when the device reconnects.

Q4) Evaluate mobile BI tools in terms of:

security features: (Authentication, Access Control).

Microsoft Power BI / Tableau / Qlik Sense

All tools provide strong security features including user authentication (OAuth, SSO), role-based access control, and data encryption to ensure secure access to business data.

performance on mobile devices:

Power BI: It performs efficiently with optimized mobile reports and fast loading times.

Tableau: Tableau may require optimization for large dashboards but delivers high-quality visuals.

Qlik Sense: Qlik Sense performs well due to its in-memory processing, enabling fast data retrieval.

suitability for enterprise use:

Power BI: Ideal for organizations using Microsoft ecosystems.

Tableau: Preferred for advanced analytics and visualization needs.

Qlik Sense: Suitable for organizations requiring flexible and associative data exploration.
