

Name : UDHAYARAJAN J.

class : MCA - I.

Roll no : 0209561.

Date : 2026-04-09.

Subject : Python programming.

Type : CCE (Open & Short)

- ① python program to find and print the longest word in a file with its length.

```
def longest_word(filename):
    with open(filename, 'r') as file:
        words = file.read().split()

    max_length = max(len(word) for word in words)
    longest = [word for word in words if len(word) == max_length]

    print('Longest words: ', longest)
    print('Max length', max_length)

longest_text('sample.txt')
```

- ② three common file exceptions with examples.

a) FileNotFound Error.

occurs when the file does not exist.

```
try:
    f = open('abc.txt', 'r')
except FileNotFound:
    print('file not found')
```

b) permissionError

occurs when access permission is denied.

```
try:
    f = open('protected.txt', 'w')
except permissionError:
    print('permission denied')
```

c) IOError (OS Error).

occurs during input/output operation.

```
try:
    f = open('sample.txt', 'r')
    f.write('Hello')
except IOError:
    print('input/output error')
```

Q python program to read last n lines of a file.

```
def last_n_line(filename, n):
    with open(filename, 'r') as file:
        lines = file.readlines()
        for line in lines[-n:]:
            print(line, end='')

```

```
n = int(input('Enter n:'))
last_n_line('sample.txt', n)
```

Q python program to read file line by line and store in list.

```
def file_to_list(filename):
    with open(filename, 'r') as file:
        lines = file.readlines()
    return lines
```

```
result = file_to_list('sample.txt').  
print(result).
```

- ⑥ python program to count lines and words in a file.

```
def count_lines_words(filename):  
    with open(filename, 'r') as file:  
        lines = file.readlines()  
  
    line_count = len(lines)  
    word_count = sum(len(line.split()) for line in  
                      lines)  
    print('Number of lines:', line_count)  
    print('Number of words:', word_count)
```

```
count_line_words('sample.txt')
```

- ⑥ python program to append contents using write() method.

```
def append_to_file(filename, content):  
    with open(filename, 'w') as file:  
        file.write(content)
```

```
append_to_file('sample.txt', 'In this is appended  
content')  
print('content appended successfully')
```
