Type : Practical No 5

Q5. Create the following tables:

Salesman_master

Columnname	Datatype	Size	Attributes
Salesman_no	varchar2	6	Primary key; first letter must start with 's'
Sal_name	varchar2	20	Not null
Address	varchar2		Not null
City	varchar2	20	
State	varchar2	20	
Pincode	Number	6	
Sal_amt	Number	8,2	Not null, cannot be 0
Tgt_to_get	Number	6,2	Not null, cannot be 0
Ytd_sales	Number	6,2	Not null, cannot be 0
Remarks	varchar2	30	

The screenshot shows the MySQL Workbench interface. In the left sidebar, the 'Schemas' panel is open, and the 'salesman_master' table is highlighted under the 'dbms_practical_61' database. The main editor window displays the SQL script for creating the table:

```

1 CREATE TABLE salesman_master (
2   Salesman_no VARCHAR(6) NOT NULL,
3   Sal_name VARCHAR(20) NOT NULL,
4   Address TEXT NULL,
5   City VARCHAR(20) NULL,
6   State VARCHAR(20) NULL,
7   PinCode INT NULL,
8   Sal_amt DECIMAL(8,2) NOT NULL,
9   Tgt_to_get DECIMAL(6,2) NOT NULL,
10  Ytd_sales DECIMAL(6,2) NOT NULL,
11  Remark VARCHAR(30) NULL,
12
13  PRIMARY KEY (Salesman_no)
14 );
  
```

The 'Output' panel at the bottom shows the execution results:

```

1 14:45:24 CREATE TABLE salesman_master ( Salesman_no VARCHAR(6) NOT NULL, Sal_name VARCHAR(20) NOT NULL, Address TEXT NULL, City VARCHAR(20) NULL, State VARCHAR(20) NULL, PinCode INT NULL, Sal_amt DECIMAL(8,2) NOT NULL, Tgt_to_get DECIMAL(6,2) NOT NULL, Ytd_sales DECIMAL(6,2) NOT NULL, Remark VARCHAR(30) NULL, PRIMARY KEY (Salesman_no)) 0 row(s) affected 0.015 sec
  
```

Sales_order

Columnname	Datatype	Size	Attributes
S_order_no	varchar2	6	Primary key; first letter must be '0'
S_order_date	Date	—	Not null; must reference client_no of client_master table (Your text seems reversed, but likely means: client_no is FK referencing client_master)
Client_no	varchar2	25	Foreign key referencing client_master(client_no)
Dely_add	varchar2	—	—
Salesman_no	varchar2	6	Foreign key referencing salesman_master(salesman_no)
Dely_type	char	1	Delivery type: part ('p') / full ('f'); default = 'f'
Billed_yn	char	1	—
Dely_date	Date	—	Cannot be less than s_order_date
Order_status	varchar2	10	Allowed values: (in process, fulfilled, back order, canceled)

The screenshot shows the MySQL Workbench interface. On the left, the 'SCHEMAS' pane shows the 'dbms_practical_61' database with tables 'client_master', 'sales_order' (highlighted with a red box), and 'salesman_master'. The 'client_master' table structure is also visible. The main editor shows the SQL script to create the 'Sales_order' table with the following columns and constraints:

```

1 CREATE TABLE Sales_order (
2   S_order_no VARCHAR(6) NOT NULL,
3   S_order_date DATE NOT NULL,
4   Client_no VARCHAR(25) NOT NULL,
5   Dely_add VARCHAR(50),
6   Salesman_no VARCHAR(6),
7   Dely_type CHAR(1) DEFAULT 'f',
8   Billed_yn CHAR(1),
9   Dely_date DATE,
10  Order_status VARCHAR(10),
11
12  -- Primary key
13  PRIMARY KEY (S_order_no),
14
15  -- Must start with 0
16  CHECK (S_order_no REGEXP '^0'),
17
18  -- Delivery type must be f or p
19  CHECK (Dely_type IN ('f', 'p')),
20
21  -- Order status allowed values
22  CHECK (Order_status IN ('in', 'ful', 'back', 'cancel'))
23 )

```

The 'Output' pane at the bottom shows the execution of the 'CREATE TABLE Sales_order' statement, indicating that 0 rows were affected.

Sales_order_details

Columnname	Datatype	Size	Attributes
S_order_no	varchar2	6	Part of Primary Key; Foreign key referencing sales_order(s_order_no)
Product_no	varchar2	6	Part of Primary Key; Foreign key referencing product_master(product_no)
Qty_order	Number	8	
Qty_disp	Number	8	
Product_rate	Number	10,2	

The screenshot displays the MySQL Workbench interface. On the left, the 'Navigator' pane shows the 'dbms_practical_61' database with a table named 'sales_order_details' highlighted. The 'Information' pane shows the structure of the 'product_master' table. The main editor window contains the following SQL code:

```

1 CREATE TABLE Sales_Order_Details (
2   S_order_no  VARCHAR(6) NOT NULL,
3   Product_no  VARCHAR(6) NOT NULL,
4   Qty_order   INT,
5   Qty_disp    INT,
6   Product_rate DECIMAL(10,2),
7
8   -- Composite Primary Key
9   PRIMARY KEY (S_order_no, Product_no),
10
11  -- Foreign Key referencing Sales_Order (S_order_no)
12  FOREIGN KEY (S_order_no)
13    REFERENCES Sales_Order (S_order_no),
14
15  -- Foreign Key referencing Product_Master (Product_no)
16  FOREIGN KEY (Product_no)
17    REFERENCES Product_Master (Product_no)
18 );

```

The 'Output' pane at the bottom shows the execution result:

```

# Time Action Message Duration / Fetch
1 14:51:00 CREATE TABLE Sales_Order_Details ( S_order_no VARCHAR(6) NOT NULL, Product_no VA... 0 row(s) affected 0.031 sec

```
