Case Study : Student Management System
(Tkinter + pymongo)

Application Description:

The application is a desktop-based Management system development using Tkinter for the graphical user interface and pymongo for database operations with Mongo DB. It allows user to manage student records efficiently.

Fields available:

Roll no.

Name

Marks

Core functionalities (CRUD operations):

Add student:

Insert a new student record into in the Mongo DB database using the entered Roll no, Name and Marks.

view student:

Display all students records stored in the database in a structured format.

Updated student:

Modify existing student details based on Roll no.

Delete student:

Remove a student record from the database using Roll no.

Additional Functionalities:

Search by name:

Allow user to search and display student record based on the entered name.

Count Students:

Display the total number of student records present in the database.

Output Display:

The Result (Student records) are shown in the lower section of the interface.

Each record is displayed with roll no, name and marks.
